

Product Manager Feature Brief - Q2 2026

Product: SecureNet OS v7.2

Target Release: June 2026

1. FTTO SD-WAN Auto-Failover

Our flagship feature for enterprise campus networks. The new Auto-Failover algorithm supports a massive **10,000 concurrent sessions** seamlessly switching between primary and backup WAN links without packet loss.

2. Enhanced Security & Identity

We are fully compliant with the latest digital identity guidelines. All administrative passwords now strictly follow the updated rules to ensure maximum security against brute-force attacks.

3. API Modernization

We are continuing our push towards modern RESTful architectures. Legacy integrations are being phased out in this release.
